## **Item 8.01 Other Events.**

On February 20, 2019, Ocular Therapeutix, Inc. (the “Company”) announced that it had dosed the first patient in its OTX-TKI (tyrosine kinase inhibitor implant) Phase 1 clinical trial for the treatment of wet age-related macular degeneration (“AMD”). The first patient was dosed at the Sydney Retina Clinic in Sydney, Australia.

The Phase 1 trial is a multi-center, open-label study testing the safety, durability, and tolerability of OTX-TKI, a bioresorbable hydrogel fiber implant formulated with a tyrosine kinase inhibitor delivered by intravitreal injection in patients with wet AMD. The trial will evaluate biological activity by measuring retinal thickness using standard optical coherence tomography and following visual acuity over time. OTX-TKI is designed to deliver drug to the target tissues for a period of up to nine months.
